

## **Section 104-070      Best Management Practices**

The following practices and methods shall be incorporated into all stormwater management plans wherever possible:

1. Vegetative swales, buffers, filter strips
2. Vegetative buffer or filter strips and level spreaders
3. Grassed drainage swales, wet or dry
4. Maintain or restore pre-development vegetation
5. Minimize creation of steep slopes
6. Bio-retention structures/residential rain gardens
7. Rain water harvesting/rain barrels
8. Dry detention ponds
9. Underground detention ponds
10. Proper location and reduction of impervious surface area on site
11. Disconnect flows from multiple impervious surfaces
12. Permeable pavement choices
13. Groundwater infiltration systems (curtain drains, dry well galleries, etc.)
